

VAMPIRE

DRINK BLOOD OR DIE!

Sorcerer-led by threatening priests, falling garlic, spraying water and bonafide wit, being hit by the deadly sunrise, our vampire seeks valiantly to sink his fangs into the necks of lovely ladies.

Unique multi-dimensional movement, so realistic it looks like 3-D!
Computer augmented animation uses heretofore unused hardware components which combine the best points of full graphic movements with the realism of object animation.

Extra-large full screen figure control.
Unique "transformation" button lets the vampire change into a flying bat to escape capture or death. The special apperception button lets the vampire separate himself into a real, controllable figure, and a hologram-like image which can block the escape of other figures.
